# Klimn Extensions Privacy Policy

This policy explains what happens to your data when you use a Klimn extension inside a Tableau dashboard.

## What we collect

Nothing. The extensions run entirely inside your own browser, as part of your Tableau dashboard. They read the worksheet data your dashboard already gives them, render what you see, and that's it. Nothing is sent back to Klimn, and nothing is sent to any third party.

## Why that's enough

There's no server-side processing to power, no account to create, and nothing to sync across devices. Everything an extension needs to do its job happens on your machine, in your browser, using data you already have.

## Third parties

None. The extensions have no dependency on any external service to function.

Some deployments require checking that a license is valid. That check confirms the license, nothing more. It has no access to your worksheet data.

## Your choices

Since nothing is collected, there's nothing to request, correct, or delete. Questions about how a specific extension behaves can be sent to the contact below.

## Changes

This policy may be updated from time to time. The current version always lives here, with its effective date below.

## Contact

Questions about this policy can go to hello@klimn.com.

Effective: August 22, 2026
